The University of Minnesota will provide you with a world-class education and limitless opportunities as a pre-med student at one of the nation’s top research universities. You can choose from 150 majors at the U of M to find something that sparks your interest while taking prerequisite coursework for admission to medical school.

What you’ll find at the U of M are great resources to help prepare you for your graduate studies, like the Pre-Health Student Resource Center. The University’s Pre-Health Student Resource Center provides pre-med advising services that can help with explaining medical school requirements, how to prepare a competitive application, and how to excel on the Medical College Admission Test (MCAT).

In addition to the Pre-Health Student Resource Center, you will be on the campus of one of the country’s premier medical schools, and in our great Twin Cities location that serves as a hub of a major regional center for health care education, research, and practice. This means you can start building relationships and familiarizing yourself with the health community on the U of M campus before you complete your undergraduate degree.

Additionally, the Undergraduate Research Opportunities Program (UROP) provides a unique opportunity to collaborate with faculty on design and implementation of a research project. UROP gives you the chance to build a strong educational partnership with a professor and gain credentials to help you stand out when being considered for medical school.
There are 900+ student groups at the University of Minnesota and a considerable number of them are for students in the health sciences. So, whether you spend your time at the Pre-Health Student Resource Center, in UROP, with one of these student groups, or all of the above, you will find that the U of M prepares you well for your future in medicine.

For a comprehensive description of medical school requirements and guidance on how to prepare for successful admission to medical school, visit our Pre-Health Student Resource Center page: http://www.healthcareers.umn.edu/health-careers/medicine.
